

# Planner I Dublin

The Planner will oversee planning and project controls during preconstruction and construction phases. This includes developing and managing project schedules, ensuring timely progress, and providing regular performance feedback.

## Key Responsibilities:

- Develop baseline programmes covering design, procurement, construction, and handover phases with clear logic and critical paths.
- Create target programmes to identify potential improvements.
- Manage tender event programmes for subcontractor procurement.
- Maintain planning documents in a structured, retrievable format.
- Provide programme data to support the project management team.
- Develop 4D graphical models or 2D phasing plans for sequencing, logistics, and phasing.
- Collaborate with the supply chain to integrate schedules for design, lead-in, and construction needs.
- Assess risks and opportunities in programmes, proposing mitigation measures.

## Requirements:

- Relevant degree or diploma in construction or project management.
- Proficiency in planning software (e.g., Asta Powerproject, Primavera P6).
- Knowledge of JCT and NEC contracts.
- Membership in a relevant professional body is advantageous.
- Training in people management and cost/resource management is desirable.
