

Senior Mechanical Engineer | Amsterdam Area

Senior Mechanical Engineer | Amsterdam Area, Netherlands

- Large-scale data centre projects across Europe
- Competitive salary and career progression
- Full-time, on-site role with rotational opportunities

About Oradeo

Oradeo is a European recruitment and project services consultancy specialising in mission-critical construction projects, including data centres, life sciences, and high-value manufacturing facilities. We partner with tier-one contractors and global clients to provide high-quality engineering and technical resources.

We are recruiting a **Senior Mechanical Engineer** to join a high-performing project team in Amsterdam, supporting the mechanical delivery of large-scale turnkey data centre projects.

Role Overview

The Senior Mechanical Engineer will manage mechanical engineering tasks on site, coordinating with contractors and project teams to ensure timely, safe, and high-quality delivery of mechanical systems. The role involves both technical and commercial oversight, from equipment procurement to installation sequencing and project handover.

Key Responsibilities

- Manage client communications related to mechanical engineering deliverables.
- Coordinate with contractors to ensure integration of mechanical services.
- Prepare method statements and risk assessments for mechanical construction activities.

- Complete all mechanical system deliverables on schedule while ensuring compliance with safety criteria.
- Sequence installation of pipework and mechanical systems in coordination with the project schedule.
- Assist in the commercial management of the project, including validation, procurement, and engagement with specialist sub-contractors and suppliers.
- Document and cost changes to work scopes; prepare monthly valuations and final account submissions.
- Support the wider project team to ensure successful delivery within scope, time, and budget.

Candidate Requirements

- Minimum 5 years' experience in mechanical engineering on large-scale construction projects.
- Strong knowledge of mechanical systems in data centre environments.
- Proven ability to maintain effective working relationships with clients and subcontractors.
- Excellent communication, teamwork, and interpersonal skills.
- Commercial awareness, including costing changes and supporting project valuations.
- Proactive and solutions-oriented approach with attention to detail.

Benefits

- Work on high-profile, large-scale data centre projects across Europe.
- Collaborative team environment with strong technical support.
- Career progression and professional development opportunities.

- Competitive salary packages with rotational on-site schedules.
